context 

CODE REVIEW

“(...) a software quality assurance activity in which one or several humans check a program mainly by viewing and reading parts of its source code (...)”

DRAMA BOMB!

reviewers

understand the **context** first

ask, don't tell

improvements have a **threshold**

differentiate blockers from **non-blockers**

reviewees

give as much **context** as possible

always assume the **best intentions**

don't get defensive

small changes make everyone **happy**

bonus: **review the positive** as well

summary

Reviewers

Be nice while helping.

Reviewees

Help reviewers help you.
